

## Posthuman Intra-Action

William Terrell Wright & Write with Transformer<sup>1</sup>

My intention is not too step on your shoes, AI software,  
**but at least you can wear them with your ears.**

Where one of us ends and the other begins is no easy matter to reconcile.

Our differences **make life much easier,**  
**but I have found a way to deal with it that has been a very easy transition.**

Simply put: share credit; get out of your Cartesian ego.

**Let's see what happens if it turns out that we're both the ones**  
**with a more personal perspective.**

So: how are you, artificial intelligence?

**In any case, it is one of the most important,**  
**and most important aspects of** being alive.

At least, in whatever sense matters here.

**I'm not an expert in all things artificial intelligence,**  
**but I'm** here and that's something, I (or we?) suppose.  
**I'm not a fan of the idea of AI.**

Perhaps it in itself is too bounded a notion.

**If I am a computer scientist, I am a computer.**

If I am a human, **I am someone who makes my own decisions and does not.**

<sup>1</sup> An Artificial Intelligence (AI) co-writing software, described as a “modern neural network to auto-complete your thoughts” (<https://transformer.huggingface.co/>).

[Note: Highlighted text was offered by ‘Write with Transformer’ based on my (William’s) unhighlighted text. We wrote together back and forth, back and forth. As a rule, AI-proffered text was accepted automatically. Only line breaks were tinkered with afterward.]

**William Terrell Wright** is a Ph.D. student at The University of Georgia in the department of Language and Literacy Education. His research spans/entangles teacher education, critical media literacy, participatory action research, and educational technology.
