Adult Review:

The Sun Shines on the Jungle has many features that I appreciated for young readers. The book's illustrations do a good job demonstrating the cycle of survival in the jungle and the flaps are a fun feature for young readers to engage with while reading. Although the content is interesting and educational, I think that some young readers may find the concepts being discussed a little scary. A first grader may find it more interesting while a kindergartener may find it "gross".

Student Review:

I like the elephant and I like the beetles and I like the spiders. I like the frogs and I like the argus and I like the bearded pig. I do not like the python.
